
Deploy PCF Control with Power Platform CLI

1. Create a New Folder

- In your project directory, create a new folder named solution.
- Navigate into this newly created folder.

2. Initialize the PCF Component

- pac solution init -pn “recruitment” -pp "xxxxx”

3. Add Solution Reference

- pac solution add-reference --path "root"

4. Return to the Root Directory

- cd ..

5. Build the Solution

- msbuild /t:build /restore

6. Authenticate with Power Platform

- pac auth create --url https://your-environment-url

7. Push the Component to Power Platform

- pac pcf push --publisher-prefix "xxxxx”
